Chapter 06 Q&A

Q: The monitor keeps switching and flicker, although it connected to outlet for extra power supply.

A: This situation is generally caused by insufficient voltage; Please check whether the factory-packed cables are used, and then check whether an external PD power supply is used.

Q: Can we supply energy from power bank without using self power adapter?

A: That depends on the output of the power bank, because this monitor requires at least 15W power supply.

And if the output of your power bank is only 10W , this power bank will not supply enough energy for the monitor.

The output of power adapter we provide is 15W, so a power bank with output above 18W is recommended.

Q: Is it possible to set the default contrast? I have to adjust each time from 10% to 70%, each time I connect to my Macbook Pro laptop.

A: How to save the settings of brightness, volume, etc.

When the HDMI port is used for display and monitor powered by Type C port, all the settings will be saved automatically.

But when the Type-C port is used for display without external power supply, brightness and volume will not be saved after the monitor is powered off, this design is to avoid that the monitor doesn't work when connected to phones which could not provide enough power for monitor with high brightness setting. So to avoid the brightness is reset everyday, please give the monitor an external power supply with Type C port and do not cut off the power.

Actually, all the portable monitors on Amazon all have this same design.

Q: Touchscreen isn't responsive or not working.

A: 1. For mobile phones

① Touchscreen is not working when connecting to a mobile phone supporting USB3.1. Please contact us to upgrade the display program.

② Touchscreen isn't responsive or not working if the phone doesn't support USB3.1. Please check the phone model to ensure if it supports USB3.1.

2. For game devices (Nintendo, XBOX, PS4, etc.), the touch-function is unresponsive.

3. For Computer/Micro-host. Please check the connection. Please use the genuine cable provided. Incorrect connection may arouse touch-function unresponsive in most cases.

4. If the connection is correct and the touch-function is still unresponsive. Please try another computer. If it failed, please contact us for the replacement of the touch cable.
