#### 1 ABOUT THIS MANUAL

#### 1.1 Purpose

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

#### 1.2 Scope

This manual provides safety and installation guidelines as well as information on tools and wiring.

#### **2 SAFETY INSTRUCTIONS**

WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.

- 1. Before using the unit, read all instructions and cautionary markings on the unit, the batteries and all appropriate sections of this manual.
- 2. **CAUTION** --To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries. Other types of batteries may burst, causing personal injury and damage.
- 3. Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
- 4. To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning. Turning off the unit will not reduce this risk.
- 5. **CAUTION** Only qualified personnel can install this device with battery.
- 6. **NEVER** charge a frozen battery.
- 7. For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It's very important to correctly operate this inverter/charger.
- 8. Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
- 9. Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
- 10. One piece of 150A fuse is provided as over-current protection for the battery supply.
- 11. GROUNDING INSTRUCTIONS -This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
- 12. NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
- 13. **Warning!!** Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.

#### 3 INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

#### 3.1 Features

- Pure sine wave inverter
- □ Configurable input voltage range for home appliances and personal computers via LCD setting
- □ Configurable battery charging current based on applications via LCD setting
- □ Configurable AC/Solar Charger priority via LCD setting

- Overload/ Over temperature/ short circuit protection
- Cold start function

#### 3.2 Basic System Architecture

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

- □ Generator or Utility.

Consult with your system integrator for other possible system architectures depending on your requirements. This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner.

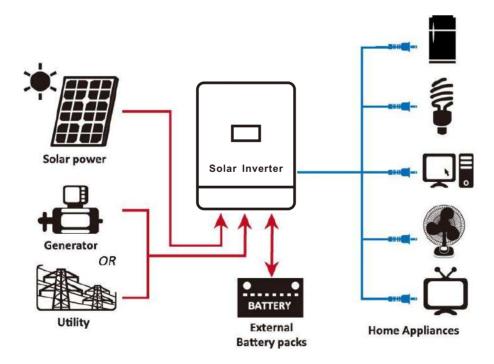

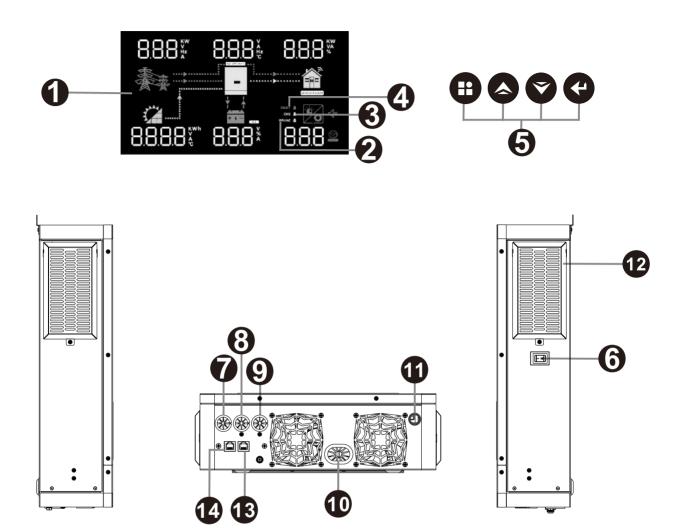

Figure 1 Hybrid Power System

#### 3.3 Product Overview

- 1. LCD display
- 2. Status indicator
- 3. Charging indicator
- 4. Fault indicator
- 5. Function buttons
- 6. Power on/off switch
- 7. AC input
- 8. Main output
- 9. Second output
- 10. Battery input
- 11. PV input
- 12. Anti dust kit
- 13. WIFI communication/RS-232 port
- 14. Battery communication/RS-485 port

#### 4 INSTALLATION

#### 4.1 Unpacking and Inspection

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

☐ The unit x 1

□ User manual x 1

#### 4.2 Preparation

Before connecting all lines, remove the screws under the machine and remove the bottom cover plate.

#### 4.3 Mounting the Unit

Consider the following points before selecting where to install:

- ₩ Do not mount the inverter on flammable construction materials.
- Mount on a solid surface
- \( \mathbb{H} \) Install this inverter at eye level in order to allow the LCD display to be read at all times.
- For proper air circulation to dissipate heat, allow a clearance of approx. 20 cm to the side and approx. 50 cm above and below the unit.
- # The ambient temperature should be between 0°C and 55°C to ensure optimal operation.
- \( \mathbb{H} \) The recommended installation position is to be adhered to the wall vertically.
- Make sure that other objects and surfaces are left with enough space from the machine to ensure adequate heat dissipation and that there is enough room to remove the wires.

#### SUITABLE FOR MOUNTING ON CONCRETE OR OTHER NON-COMBUSTIBLE SURFACE ONLY.

Install the unit by screwing two screws. It's recommended to use M6 screws.

#### 4.4 Battery Connection

**CAUTION:** For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

**WARNING!** All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable as below.

#### Recommended battery cable size:

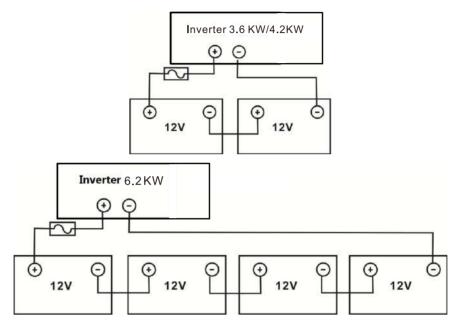

Model	Wire Size	Cable (mm²)	Torque value (max)
3.6KW/4.2KW/6.2KW	1 x 2AWG	25	2 Nm

Please follow below steps to implement battery connection:

- 1. Remove insulation sleeve 18 mm for positive and negative conductors.
- 2. Suggest to put bootlace ferrules on the end of positive and negative wires with a proper crimping tool.

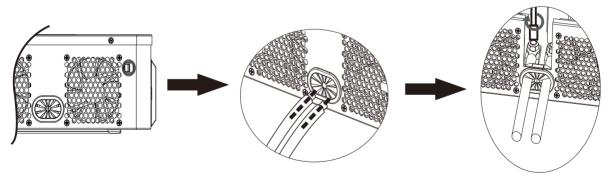

3. Connect all battery packs as below chart.

4. Insert the battery wires flatly into battery connectors of inverter and make sure the bolts are tightened with torque of 2 Nm in clockwise direction. Make sure polarity at both the battery and the inverter/charge is correctly connected and conductors are tightly screwed into the battery terminals.

Recommended tool: #2 Pozi Screwdriver

#### **WARNING: Shock Hazard**

Installation must be performed with care due to high battery voltage in series.

**CAUTION!!** Before making the final DC connection or closing DC breaker/disconnector, be sure positive (+) must be connected to positive (+) and negative (-) must be connected to negative (-).

#### 4.5 AC Input/Output Connection

**CAUTION!!** Before connecting to AC input power source, please install a **separate** AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 32A for 3.6KW/4.2KW and 50A for 6.2KW.

**CAUTION!!** There are two terminal blocks with "IN" and "OUT" markings. Please do NOT mis-connect input and output connectors.

**WARNING!** All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

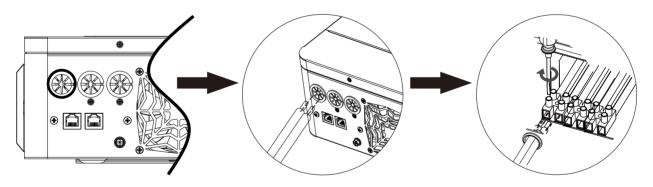

#### Suggested cable requirement for AC wires

Model	Gauge	Cable (mm²)	Torque Value
3.6KW/4.2KW	12 AWG	4	1.2 Nm
6.2KW	10 AWG	6	1.2 Nm

Please follow below steps to implement AC input/output connection:

- 1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
- 2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3 mm.
- 3. Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws.

#### L→LINE (brown or black) N→Neutral (blue)

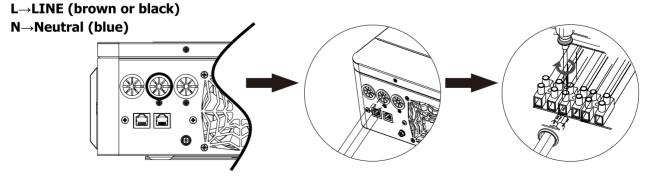

#### **WARNING:**

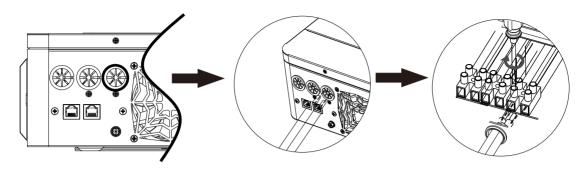

Be sure that AC power source is disconnected before attempting to hardwire it to the unit.

4. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws.

5. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws.

#### L→LINE (brown or black) N→Neutral (blue)

6. Make sure the wires are securely connected.

**CAUTION:** Appliances such as air conditioner are required at least 2~3 minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

#### 4.6 PV Connection

**CAUTION:** Before connecting to PV modules, please install **separately** a DC circuit breaker between inverter and PV modules.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

Model	Wire Size	Cable (mm <sup>2</sup> )	Torque value (max)
3.6KW/4.2KW/6.2KW	1 x 12AWG	4	1.2 Nm

#### **PV Module Selection:**

When selecting proper PV modules, please be sure to consider below parameters:

- 1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.
- 2. Open circuit Voltage (Voc) of PV modules should be higher than min. battery voltage.

INVERTER MODEL	3.6KW/4.2KW	6.2KW
Max. PV Array Open Circuit Voltage	500Vdc	
PV Array MPPT Voltage Range	60Vdc~450Vdc	

Take 250Wp PV module as an example. After considering above two parameters, the recommended module configurations are listed as below table.

Solar Panel Spec. (reference)	SOLAR INPUT	O'ty of papels	Total input
	(Min in serial: 6 pcs, max. in serial: 13 pcs)	Q'ty of panels	power
- 250Wp - Vmp: 30.1Vdc	6 pcs in serial	6 pcs	1500W
- Imp: 8.3A	8 pcs in serial	8 pcs	2000W
- Voc: 37.7Vdc - Isc: 8.4A - Cells: 60	12 pcs in serial	12 pcs	3000W
	13 pcs in serial	13 pcs	3250W
	8 pieces in serial and 2 sets in parallel	16 pcs	4000W
	10 pieces in serial and 2 sets in parallel	20 pcs	5000W
	12 pieces in serial and 2 sets in parallel	24 pcs	6500W
	10 pieces in serial and 3 sets in parallel	30 pcs	7500W

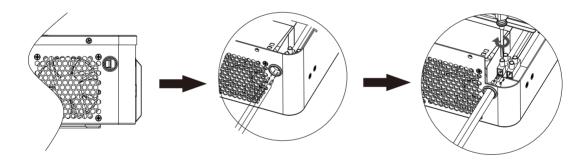

#### **PV Module Wire Connection**

Please follow below steps to implement PV module connection:

- 1. Remove insulation sleeve 10 mm for positive and negative conductors.
- Suggest to put bootlace ferrules on the end of positive and negative wires with a proper crimping tool.

3. Check correct polarity of wire connection from PV modules and PV input connectors. Then, connect positive pole (+) of connection wire to positive pole (+) of PV input connector. Connect negative pole (-) of connection wire to negative pole (-) of PV input connector. Recommended tool: 4mm blade screwdriver

#### 4.7 Final Assembly

After connecting all wirings, please put bottom cover back by screwing two screws as shown below.

#### 4.8 Communication Connection

#### 1. Wi-Fi cloud communication (option):

Please use supplied communication cable to connect to inverter and Wi-Fi module. Download APP and installed from APP store, and Refer to "Wi-Fi Plug Quick Installation Guideline" to set up network and registering. The inverter status would be shown by mobile phone APP or webpage of computer.

#### 2. GPRS cloud communication (option):

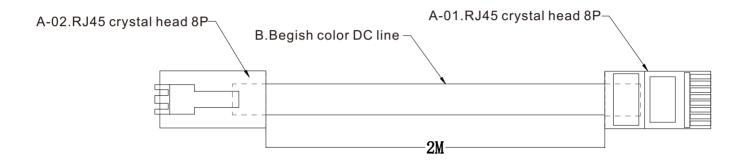

Please use supplied communication cable to connect to inverter and GPRS module, and then applied external power to GPRS module. Download APP and installed from APP store, and Refer to "GPRS RTU Quick Installation Guideline" to set up network and registering. The inverter status would be shown by mobile phone APP or webpage of computer.

#### 3. Battery communication

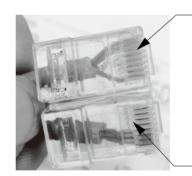

The communication between the battery and the inverter can be realized through the battery communication interface, so that the inverter and the lithium battery can exchange information (Baud rate: 9600).

#### 4. Lithium battery and inverter connection:

Use power cables, communication cables for lithium batteries, and inverters to connect. Note:Lithium battery and inverter positive and negative positions, check the correct installation;The RJ45 connector of the communication cable connects to the BMS port of the inverter, and the other RJ45 connector connects to the RS485 port of the lithium battery;Before connecting, make sure that the lithium battery and inverter are turned off.(It is recommended to install a circuit breaker for the power cables of the lithium battery and the inverter battery interface. Otherwise, a spark may occur.)

#### **5 OPERATION**

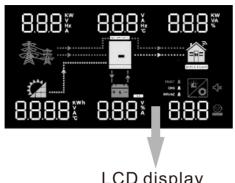

#### 5.1 Power ON/OFF

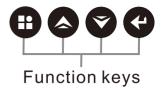

Once the unit has been properly installed and the batteries are connected well, simply press On/Off switch (located on the button of the case) to turn on the unit.

#### 5.2 Operation and Display Panel

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

LCD display

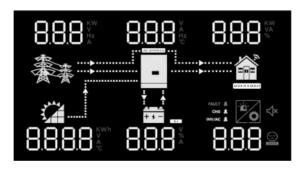

#### **LED Indicator**

LED In	ndicator		Messages
	Croon		Output is powered by utility in Line mode.
INV/AC 🛔	Green	Flashing	Output is powered by battery or PV in battery mode.
aug A Consu		Solid On	Battery is fully charged.
CHG 🖺	Green	Flashing	Battery is charging.
FALLET A	Red Solid On Flashing	Solid On	Fault occurs in the inverter.
FAULT 💂		Flashing	Warning condition occurs in the inverter.

#### **Function Keys**

Function Key	Description	
ESC	To exit setting mode	
UP	To go to previous selection	
DOWN	To go to next selection	
ENTER	To confirm the selection in setting mode or enter setting mode	

#### 5.3 LCD Display Icons

Icon	Function description

1 Battery Mode:red Light

2 Utility Mode:blue Light

③ PV Mode:purple Light

#### 5.7 Battery Equalization Description

Equalization function is added into charge controller. It reverses the buildup of negative chemical effects like stratification, a condition where acid concentration is greater at the bottom of the battery than at the top. Equalization also helps to remove sulfate crystals that might have built up on the plates. If left unchecked, this condition, called sulfation, will reduce the overall capacity of the battery. Therefore, it's recommended to equalize battery periodically.

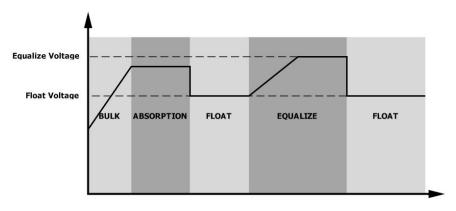

#### **♯** How to Apply Equalization Function

You must enable battery equalization function in monitoring LCD setting program 30 first. Then, you may apply this function in device by either one of following methods:

- 1. Setting equalization interval in program 35.
- 2. Active equalization immediately in program 36.

#### **₩ When to Equalize**

In float stage, when the setting equalization interval (battery equalization cycle) is arrived, or equalization is active immediately, the controller will start to enter Equalize stage.

#### **★ Equalize charging time and timeout**

In Equalize stage, the controller will supply power to charge battery as much as possible until battery voltage raises to battery equalization voltage. Then, constant-voltage regulation is applied to maintain battery voltage at the battery equalization voltage. The battery will remain in the Equalize stage until setting battery equalized time is arrived.

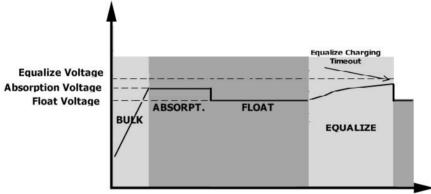

Equalize Charging Time

Absorption Voltage
Float Voltage

BULK ABSORPT. FLOAT

EQUALIZE

However, in Equalize stage, when battery equalized time is expired and battery voltage doesn't rise to battery equalization voltage point, the charge controller will extend the battery equalized time until battery voltage achieves battery equalization voltage. If battery voltage is still lower than battery equalization voltage when battery equalized timeout setting is over, the charge controller will stop equalization and return to float stage.

#### 5.8 Mains and lithium battery activation function

- 1. After 90s of mains power connection to the inverter, the machine is connected to the mains and starts to work.
- 2. The inverter is in lithium battery mode (item 05 is LIP or LIL). After the mains is connected, the battery is not connected, and the mains activation function is automatically enabled.

#### 5.9 Fault Reference Code

Fault Code	Fault Event	Icon on
01	Fan is locked when inverter is off.	☐ I ERROR
02	Over temperature	02 ERROR
03	Battery voltage is too high	03 ERROR
04	Battery voltage is too low	<b>UH</b> ERROR
05	Output short circuited or over temperature is detected by internal converter components.	05 error
06	Output voltage is too high.	06 error
07	Overload time out	□ T <sub>ERROR</sub>
08	Bus voltage is too high	08 error
09	Bus soft start failed	09 error
51	Over current or surge	5 I ERROR
52	Bus voltage is too low	52 ERROR
53	Inverter soft start failed	53 <sub>error</sub>
55	Over DC voltage in AC output	55 ERROR
57	Current sensor failed	57 <sub>ERROR</sub>
58	Output voltage is too low	58 <sub>error</sub>
59	PV voltage is over limitation	59 <sub>error</sub>

	The battery fault code is added in lithium battery mode			
Fault code Fault event Fault condition		Fault condition		
02	The battery temperature is too high Procedure	Lithium battery charging battery temperature ≥65° C; The discharge temperature of the lithium battery is higher than 70 ° C.		
03	The battery voltage is too high Procedure	Lithium battery maximum single cell voltage >3.65V; Total voltage of lithium battery >54.6V (48V lithium battery); Total voltage of lithium battery >29.1V (24V lithium battery).		
04	The battery voltage is too low Procedure	Minimum voltage of a lithium battery cell<2.71V; Lithium battery total voltage<40.4V (48V lithium battery); Lithium battery voltage<21.5V (24V lithium battery).		

#### 5.10 Warning Indicator

Warning Code	Warning Event	Audible Alarm	Icon flashing
01	Fan is locked when inverter is on.	Beep three times every second	() ()
03	Battery is over-charged	Beep once every second	D3®
04	Low battery	Beep once every second	04®
07	Overload	Beep once every 0.5 second	070
10	Output power derating	Beep twice every 3 seconds	ID®
15	PV energy is low.	Beep twice every 3 seconds	<u>ت</u> @
<i>E9</i>	Battery equalization	None	Ed@
62	Battery is not connected	None	Pb <sub>®</sub>

Added a battery warning code in lithium battery mode				
Warning code				
04	The battery voltage is too low	Minimum voltage of a lithium battery cell<2.85V; Lithium battery total voltage<42V (48V lithium battery); Lithium battery voltage<22.4V (24V lithium battery).		
05	The battery voltage is too high	Lithium battery maximum single cell voltage >3.55V; Total voltage of lithium battery >54V (48V lithium battery); Total voltage of lithium battery >28.8V (24V lithium battery).		
06	The battery is low warning	Remaining battery capacity ≤10%		

#### 6 CLEARANCE AND MAINTENANCE FOR ANTI-DUST KIT

#### 6.1 Overview

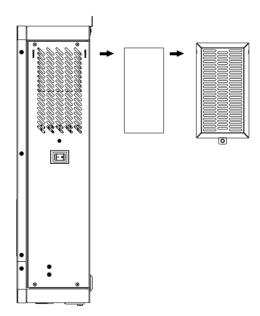

Every inverter is already installed with anti-dusk kit from factory. Inverter will automatically detect this kit and activate internal thermal sensor to adjust internal temperature. This kit also keeps dusk from your inverter and increases product reliability in harsh environment.

#### 6.2 Clearance and Maintenance

**Step 1:** Please loosen the screw in counterclockwise direction on the top of the inverter.

Step 2: Then, dustproof case can be removed and take out air filter foam as shown in below chart.

**Step 3:** Clean air filter foam and dustproof case. After clearance, re-assemble the dust-kit back to the inverter.

**NOTICE:** The anti-dust kit should be cleaned from dust every one month.

#### **8 TROUBLE SHOOTING**

Problem	LCD/LED/Buzzer	Explanation / Possible cause	What to do	
Unit shuts down automatically during startup process.	utomatically will be active for 3 The battery voltage is too low uring startup seconds and then (<1.91V/Cell)		Re-charge battery.     Replace battery.	
No response after power on.	No indication.	1. The battery voltage is far too low. (<1.4V/Cell) 2. Internal fuse tripped.	<ol> <li>Contact repair center for replacing the fuse.</li> <li>Re-charge battery.</li> <li>Replace battery.</li> </ol>	
	Input voltage is displayed as 0 on the LCD and green LED is flashing.	Input protector is tripped	Check if AC breaker is tripped and AC wiring is connected well.	
Mains exist but the unit works in battery mode.	Green LED is flashing.	Insufficient quality of AC power. (Shore or Generator)	<ol> <li>Check if AC wires are too thin and/or too long.</li> <li>Check if generator (if applied) is working well or if input voltage range setting is correct. (UPS♠ Appliance)</li> </ol>	
	Green LED is flashing.	Set "Solar First" as the priority of output source.	Change output source priority to Utility first.	
When the unit is turned on, internal relay is switched on and off repeatedly.	LCD display and LEDs are flashing	Battery is disconnected.	Check if battery wires are connected well.	
	Fault code 07	Overload error. The inverter is overload 110% and time is up.	Reduce the connected load by switching off some equipment.	
	Fault code 05	Output short circuited.	Check if wiring is connected well and remove abnormal load.	
		Temperature of internal converter component is over 120°C.	Check whether the air flow o the unit is blocked or whethe	
	Fault code 02	Internal temperature of inverter component is over 100°C.	the ambient temperature is too high.	
		Battery is over-charged.	Return to repair center.	
Buzzer beeps continuously and red LED is on.	Fault code 03	The battery voltage is too high.	Check if spec and quantity of batteries are meet requirements.	
	Fault code 01	Fan fault	Replace the fan.	
	Fault code 06/58	Output abnormal (Inverter voltage below than 190Vac or is higher than 260Vac)	Reduce the connected load.     Return to repair center	
	Fault code 08/09/53/57	Internal components failed.	Return to repair center.	
	Fault code 51	Over current or surge.	Restart the unit, if the error	
	Fault code 52	Bus voltage is too low.	happens again, please return	
	Fault code 55	Output voltage is unbalanced.	to repair center.	

#### 9 Appendix: Approximate Back-up Time Table

Model	Load (W)	Backup Time @ 24Vdc 100Ah (min)	Backup Time @ 24Vdc 200Ah (min)
	300	449	1100
	600	222	525
	900	124	303
	1200	95	227
	1500	68	164
3.6KW	1800	56	126
4.2KW	2100	48	108
	2400	35	94
	2700	31	74
	3200	28	67
	3600	25	60
	4200	22	53

Model	Load (W)	Backup Time @ 48Vdc 100Ah (min)	Backup Time @ 48Vdc 200Ah (min)
	500	613	1288
	1000	268	613
	1500	158	402
	2000	111	271
6 21/14/	2500	90	215
6.2KW	3200	76	182
	3500	65	141
	4000	50	112
	4500	44	100
	5000	40	90
	6200	36	80

**Note:**1.Backup time depends on the quality of the battery, age of battery and type of battery. Specifications of batteries may vary depending on different manufacturers.

2. The final interpretation right of this product belongs to the company.
